

Press Release

Superior Temperature Technology for a Better Life

In addition to its diverse product line, JULABO will exhibit selected products from the CORIO, DYNEO, and PRESTO series at this year's Achema.

Seelbach, 05.06.2018 Visitors to JULABO's redesigned booth (Achema Hall 4.2, Booth J38) from June 11 to 15 will be treated to exciting and varied highlights under the motto "Superior Temperature Technology for a Better Life".

JULABO is one of the leading providers of professional temperature control technology and will present an overview of solutions for routine and specialized tasks at both the lab and industrial scale. Visitors will have the unique opportunity to get a close and personal look at JULABO's varied line of heating and cooling circulators, highly dynamic process circulators, recirculating coolers, and water baths.

Immersion circulators, heating circulators, and refrigerated circulators of the new DYNEO series incorporate pioneering technology with high standards for accuracy, cost efficiency, ergonomics, and precision in temperature control. They cover a temperature range of -50 to +200 °C and are available in several different performance classes. Units of the DYNEO series are user-focused, with a unique rotary knob for a new, modern method of control. Conveniently located on the front side of the circulator head, it provides direct access to the menu for control of all functions and settings. Unlike similar instruments with a touch display, the rotary knob gives the user tactile verification of each completed action. DYNEO's sophisticated yet straightforward operating concept makes it easier to quickly access the most frequently used functions.

In addition to the standard product line and the new DYNEO series, JULABO will also be exhibiting selected CORIO units, which are designed for extreme flexibility. They are the ideal way to get started in the world of professional temperature control and are capable of handling a wide range of routine applications.

By enabling rapid temperature changes with a high degree of precision, units of the PRESTO series are the heavy lifters of highly dynamic temperature control systems. They cover a temperature range of -92 to +250 °C with extremely high cooling and heating capacities.

Be sure to visit the JULABO booth in Hall 4.2 (Booth J38) and consult with our temperature-control experts about your specific requirements during the Achema show. The JULABO show team looks forward to your visit.

JULABO was founded in Germany in 1967. The company represents innovation and competence in the field of temperature control technology for demanding applications. Mit modernster Regeltechnik ausgestattete JULABO Geräte sind überall dort im Einsatz, wo höchste Temperaturgenauigkeit oder schnellste Reaktion auf Temperaturveränderungen gefragt ist. More than 450,000 JULABO units installed around the world demonstrate a high level of acceptance among users in research and industry. JULABO has earned its place as one of the world's leading firms in the field of temperature control solutions through its dedication to quality, German engineering, and rapid, competent support provided by local contacts.
